When disaster strikes we keep your business up and running.

Shadowcloud offers you the most comprehensive set of cloud based disaster recovery services available today. Avoid costly downtime for your business, accelerate time to recovery, and minimize the loss of your critical data by replicating your physical and virtual production servers into the Shadowcloud.

The options are endless once your server environments are mirrored in our cloud. Shadowcloud features include Server Backup and Recovery, Virtual Failover, Production Testing, and Verification of Data Integrity.

**How much revenue can your company afford to lose?**

Disaster recovery of all critical data and applications, software, devices, accessible anytime, anywhere  
**Your business is covered in three distinctive ways with Shadowcloud:**

Prevent costly outages by solving problems you can't solve on your own. Secure, Reliable, Available. Single cloud provider.
